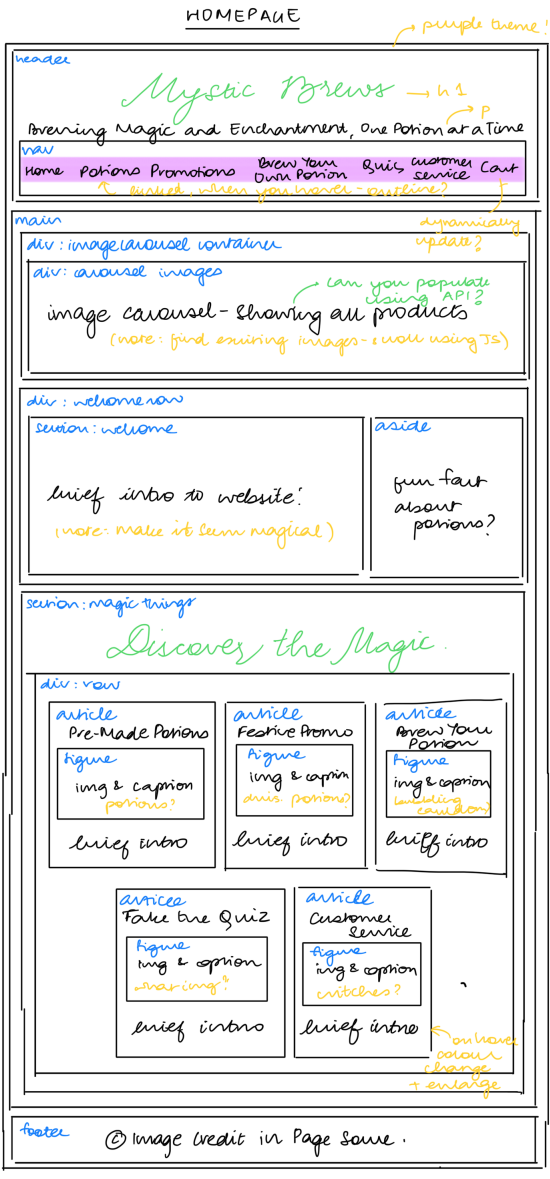
final project proposal
wireframe and ui



- background of body
- translucent main
- interactive articles
- dynamic cart updation
- how to add floating magic signs?
- maybe sound plays on opening page
- think of more creative interactions - maybe subscription to newsletter?

UI flow chart

→ user visits index.html
→ main homepage - all links, sees intro
→ clicks on article for pre-made potions
→ goes to potions.html
→ sees all possible potions
→ clicks on a potion to see additional details
→ likes & adds to cart
→ cart gets dynamically updated using JSON.
→ selects cart - goes to cart.html
→ clicks discount - API simulates cart purchase
→ success message returned & new homepage for showing success message.

whole website in purple theme - figure out API quick!; and start working on it.
maybe implement with JS first?.
